

How to set up WPS on Dlink DSL-2750E

1. Type 192.168.1.1 in the address bar and then enter

2. Type Username = admin and Password = password (all lower case) and click OK

3. Click at 'ADVANCED' and click 'Advanced Wireless' and 'WPS'. Wi-Fi PROTECTED SETTINGS page will appear, remove a check mark at 'Disable WPS' to start using WPS (recommend to click 'Start PBC' to use WPS button at the back of router, and then click 'Apply Changes')
